

Better LAMP stack

GitHub: [https://github.com/GSCloud/better_lamp_stack]

Run modern LAMP stack applications.

Usage

- **make** → CLI help

Install

- run ``**make install**'' to install minimal set
- run ``**make extensions**'' to add PHP extensions
- included Apache 2 configuration to run this on as a real public site through proxying (TLS certificates needed)
- uncomment TLS verification commands if using Authenticated origin pull
- don't forget to run ``**a2enmod proxy**'' command on the host
- use **PMA** or **Adminer** to import MySQL data

Remove

- run ``**make remove**''
- persistent data will remain

Purge

- run ``**make purge**''
- removes everything permanently

Configuration

- default configuration → **.env**
- various configuration prototypes available, just overwrite the default configuration
- extra configuration directives for php.ini → INI/ subfolder

Default Storage

- **Application** → **www/**
- **MySQL** database → **db/**
