Better LAMP stack

GitHub: [https://github.com/GSCloud/better_lamp_stack]

Run modern LAMP stack applications.

Usage

• make → CLI help

Install

- run ``make install" to install minimal set
- run ``make everything" to install simply everything for a clean new install incl. extensions
- run ``make extensions" to add PHP extensions: mysqli and redis (via PECL)
- use the included Apache 2 configuration to run this on a real site through proxying (TLS certificates needed)
- uncomment TLS verification commands if using Authenticated origin pull
- don't forget to run ``a2enmod proxy" command on the host
- use PMA or Adminer to import MySQL data

Remove

- run ``make remove"
- persistent data remains in the data storage (see below)

Clean

- run ``make clean"
- · removes database storage permanently

Configuration

- configuration directives for Docker → .env
- extra configuration directives for PHP → limits.ini, uploads.ini, timezone.ini

Data storage

- Application storage → app/
- MySQL database storage → db/
