Better LAMP stack

GitHub: [https://github.com/GSCloud/shitty_lamp_stack]

Run modern LAMP stack applications.

Usage

- **make** → CLI help

Install

- run ``**make install**''
- use the included Apache 2 configuration to run this on a real site through proxying (TLS certificates needed)
- uncomment TLS verification commands if using Authenticated origin pull
- don't forget to run ``**a2enmod proxy**'' command on the host
- use PMA or Adminer to import MySQL data

Remove

- run ``**make remove**''
- persistent data remains in the data storage (see below)

Clean

- run ``**make clean**''
- removes database storage permanently

Configuration

- configuration directives for Docker → **.env**
- extra configuration directives for PHP → **uploads.ini**

Data storage

- **Application** storage → **app/**
- **MySQL** database storage → **db/**
